JUSTIN JOHNSON

Senior DevOps Engineer | Platform Engineer | SRE | Cloud Infrastructure
Canadian | +63 960 459 2278 | justinjjohnson20@gmail.com | linkedin.com/in/justinjjohnson1 | threejay20.github.io

PROFESSIONAL SUMMARY

Senior DevOps and Platform Engineer and AWS Certified Solutions Architect with 5+ years of hands-on cloud infrastructure experience, plus a 14-year operations career at Bell Canada that ended at Senior Operations Manager. Specializes in CI/CD pipeline design, multi-cloud Infrastructure as Code (IaC), and Kubernetes platforms on AWS and GCP that ship faster, cost less, and remove operational toil. Delivered **25% faster deployment cycles**, **30% less environment provisioning overhead**, and **20% lower cloud compute costs**. Builds generative AI (GenAI) infrastructure on AWS: Amazon Bedrock (Agents, Knowledge Bases, Guardrails), RAG pipelines, vector databases, and SageMaker AI. Leads incident response and SLA governance with ISO 27001-aligned compliance. Open to remote contract and full-time DevOps, Platform, SRE, and Cloud Engineer roles.

CORE COMPETENCIES

Cloud Platforms: AWS (EKS, EC2, IAM, VPC, CloudWatch, S3, Lambda, API Gateway, Secrets Manager, Parameter Store, CloudFront), GCP (GKE)

Infrastructure as Code: Terraform, Ansible (modular, multi-environment, multi-cloud)

Containers and Orchestration: Kubernetes (EKS, GKE), Docker, Helm, Container Scheduling, Workload Optimization

CI/CD and Automation: Jenkins, GitHub Actions (OIDC), Pipeline Design, Deployment Standardization

Monitoring and Observability: Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), CloudWatch

Security and Compliance: Container Image Scanning (Trivy), Secret Detection, OIDC, DevSecOps, ISO 27001

Reliability: Incident Response, Disaster Recovery, Backup Automation, SLA Management, High Availability

Generative AI: Amazon Bedrock (Agents, Knowledge Bases, Guardrails, Flows), Foundation Models, RAG Pipelines, Vector Databases and Embeddings, Prompt Engineering, Model Context Protocol (MCP), LLM Fine-Tuning (LoRA), Amazon SageMaker AI, Model Evaluation, LangChain, MLOps

Programming and Scripting: Python, Bash/Shell, Groovy, JavaScript, Node.js, Java (Spring Boot, Maven)

Networking, Systems and Data: VPC Design, Load Balancing, CDN (CloudFront), Ingress Controllers, Linux (RHEL, Ubuntu/WSL2), DynamoDB, PostgreSQL, Git, React, FastAPI, MLflow

PROFESSIONAL EXPERIENCE

Senior DevOps Engineer | CallTek | Oct 2024 - Present

- Engineered end-to-end Jenkins CI/CD pipelines integrating Docker and Helm across dev, staging, and production, standardizing releases and **cutting deployment cycle time by 25%** while eliminating environment-specific configuration drift.
- Architected a multi-cloud library of reusable Terraform and Ansible modules for AWS and GCP, **reducing environment provisioning overhead by 30%** and letting any team spin up consistent, production-ready infrastructure on demand.
- Optimized Kubernetes workload scheduling and resource allocation on Amazon EKS, **reducing cloud compute costs by 20%** through right-sizing without impacting availability.
- Designed and automated enterprise-grade backup and disaster recovery workflows, **reducing Recovery Time Objectives (RTOs)** and removing manual recovery procedures.
- Leading an end-to-end platform migration across **1,500+ sites** (1,000+ hospitality, 500+ MDU) from a legacy platform to a cloud-native platform, owning the migration architecture, infrastructure cutover, and CI/CD pipeline delivery from inception to completion.

Freelance Software and DevOps Engineer | SaaS Startups and E-Commerce Clients | Oct 2023 - Oct 2024

- Delivered end-to-end cloud infrastructure and CI/CD automation across SaaS and e-commerce engagements, **cutting deployment times by 50-80%**, **reducing client AWS spend by 30%**, and running Kubernetes migrations without impacting availability.
- Owned the full delivery lifecycle for client-facing React and Node.js web applications: UI development, REST API integration, containerized AWS deployment, and automated CI/CD pipelines with zero manual release overhead.
- Founded Thirdmark (thirdmark.co), an AI-powered product and execution studio, applying full-stack DevOps and cloud-native architecture to build internal tooling and client-facing products from zero to deployed infrastructure.

DevOps / Software Engineer | Bell Media | Mar 2022 - Oct 2023

- **Reduced deployment failures by 30%** by designing and implementing automated CI/CD pipelines that let the engineering team ship to production multiple times per week.
- **Recovered 5+ engineering hours per sprint** by building internal developer tooling that standardized environment setup and deployment workflows.
- Strengthened security posture by embedding automated vulnerability scanning and secrets detection into CI/CD pipelines, shifting risk identification left of production.
- Accelerated editorial and content operations with React front-end components and Node.js REST APIs for internal web applications used across the business unit.
- Developed and maintained Java Spring Boot microservices built with Maven, contributing to backend service delivery.

Bell Canada | 14-Year Career Progression | Feb 2008 - Mar 2022

Grew from frontline technical support through case management, training leadership, and operations management to Senior Operations Manager, directing enterprise-scale teams.

Senior Operations Manager and Leader, Case Management | Feb 2021 - Mar 2022

- Directed a multi-line-of-business operation of **900+ agents** across diverse service channels, maintaining performance standards at enterprise scale.
- **Improved SLA attainment by 15%** by applying analytics to eliminate systemic bottlenecks across tier-1 support workflows.
- Reduced audit burden by aligning operational reporting with ISO 27001 requirements across multiple business units, supporting full audit readiness.
- Reduced Mean Time to Resolution (MTTR) by leading cross-functional incident response and establishing clear ownership paths.

Operations Manager | Apr 2020 - Feb 2021

- Directly managed 176 agents, designing training programs that **increased cross-sell close rates by 30%**.
- Deployed real-time KPI dashboards that replaced lagging manual reports, reducing undetected SLA breaches.
- Partnered with IT to implement proactive system monitoring alerts, enabling earlier issue detection and fewer customer-impacting incidents.

Earlier Roles: Training Supervisor, Case Manager, Team Leader, Technical Support | Feb 2008 - Apr 2020

- Designed and delivered a national sales training program that **doubled conversion rates over 6 months** across 900+ customer service representatives.
- Maintained a **95%+ executive escalation resolution rate** as Case Manager, leading feedback loops between frontline teams and process owners.

TECHNICAL PROJECTS

AI Infrastructure and Multi-Agent Homelab | Creator and Maintainer | github.com/threejay20/homelab-ai-stack

- Architected a 14-service containerized AI environment with Docker Compose, integrating a React/Vite frontend, FastAPI backend, and Nginx reverse proxy with WebSocket support for real-time agent streaming.
- Deployed local and cloud LLM workflows: served llama3.2:3b and phi3:mini locally via Ollama, with async Python pipelines and optional fallback routing to AWS Bedrock (Amazon Nova Micro, Claude 3.5 Haiku).
- Built an end-to-end RAG system with LangChain, sentence-transformers embeddings, and a Qdrant vector database, with MLOps and observability: MLflow experiment tracking on PostgreSQL, Evidently AI answer-quality evaluation, and Prometheus and Grafana monitoring.

CERTIFICATIONS AND EDUCATION

- **AWS Certified Solutions Architect - Associate**, Amazon Web Services
- **AWS Certified Generative AI Developer - Professional**, Amazon Web Services (in progress)
- **Software Development**, Bell University
- **Full Stack Engineering**, Codecademy
- **Project Management / Business Operations / Data Analytics**, Microsoft Learn
